

In the Claims:

19. (Amended) A method of forming a device comprising:

providing a recess within a substrate;

providing at least a portion of an RF antenna within the recess;

providing an integrated circuit at least partially within the recess and in
operative electrical connection with the antenna; and

wherein the antenna crosses itself at a bypass, said bypass comprising
dielectric material between crossing portions of the antenna.

Cancel claims 20-38 and 44-53.
